visual rules® BRMS enhances Teleco's BPM with Event Processing in Workflows

Wireless Networks BPM Systems Provider Bivision and Innovations Softwaretechnologie Sign Partner Agreement

(Immenstaad, Germany) March 28, 2006 – The German Business Rules specialist Innovations Softwaretechnologie and Bivision Systems, a globally active Decision Management Systems provider for wireless telecom operators, have signed an OEM agreement in order to leverage the InVisionJ Business Process Management System with flexible Java business rules by visual rules®.

Wireless carriers such as Algerie Telecom Mobile welcome the option of acquiring an off-the-shelf system that translates their internal business logic, interfaces with all their networks and is ready to implement any additional business rules and support organization strategies as they arise. This enables Algerie Telecom Mobile to focus on its core business.

Bivision's InVisionJ and Innovations' visual rules® Business Rules Management System (BRMS) are the perfect match for supplying Service Oriented Applications such as Web portals, Geographical Information Systems and other reporting capabilities employing user-based profiling throughout the organization. The BRMS tracks the integrity of data and business logic and generates events for the InVisionJ workflow system. visual rules® also decides whether these events are dispatched to a team based on their roles in the company or automatically trigger actions.

International Customers

visual rules® is today being used by many customers across the world. A selection of these are the U.S. company Wyndham, offering luxury hotel & resort accommodations; the German HypoVereinsbank; the producer of agricultural machinery Claas; Zafin Labs, an IT service provider located in the UAE and the Australian software specialist MobileSelect. The range of applications includes an early warning system for trading of credit default swaps, the calculation of transaction billing and the individual calculation of mobile phones and plans.
